

1. Power limit of 1500 watts is desirable.
2. Should limit to Amateur Extra class.
3. Sub-banding is NECESSARY. Suggest 5300 kHz as the dividing line between narrowband modes (CW, et al.) and wideband modes (SSB, et al.). Propagation will make this band extremely useful for not just DXing but for traffic and emergency nets. It is extremely critical to buffer CW operations from the wider modes and to provide an adequately wide CW subband. 50 kHz for CW is a fair compromise and 5300 is an easy subband divider to remember.
